

MYSQL and MONGO DB Assignment

Data tables used for Assignments:-

Employee and Transactions

Structure of table:-

```
Database changed
mysql> desc employee;
+-----+-----+-----+-----+-----+-----+
| Field          | Type          | Null | Key | Default | Extra |
+-----+-----+-----+-----+-----+-----+
| emp_id         | bigint(4)     | NO   | PRI | NULL    |       |
| emp_name       | varchar(10)   | YES  |     | NULL    |       |
| emp_DOB        | date          | YES  |     | NULL    |       |
| emp_DOJ        | date          | YES  |     | NULL    |       |
| contact        | bigint(11)    | YES  |     | NULL    |       |
| address        | varchar(30)   | YES  |     | NULL    |       |
| emp_department | varchar(11)   | YES  |     | NULL    |       |
| emp_salary     | bigint(7)     | YES  |     | NULL    |       |
+-----+-----+-----+-----+-----+-----+
8 rows in set (0.00 sec)

mysql> desc transaction
-> ;
+-----+-----+-----+-----+-----+-----+
| Field          | Type          | Null | Key | Default | Extra |
+-----+-----+-----+-----+-----+-----+
| emp_id         | bigint(4)     | YES  | MUL | NULL    |       |
| emp_name       | varchar(10)   | YES  |     | NULL    |       |
| emp_DOJ        | date          | YES  |     | NULL    |       |
| emp_salary     | bigint(7)     | YES  |     | NULL    |       |
| emp_paid       | bigint(7)     | YES  |     | NULL    |       |

mysql> 

```

Q2:- Fetch Paid average salary for the current month.

Soln:-

Query:- select avg(emp_paid) as average_salary_piad from transaction where month(emp_dop)=month(current_date());

```
mysql> select avg(emp_paid) as average_salary_paid from transaction where MONTH(emp_dop) = MONTH(CURRENT_DATE());
+-----+
| average_salary_paid |
+-----+
|          19375.0000 |
+-----+
1 row in set (0.00 sec)

mysql>
```

Q3:- Fetch the top 5 Employee's Name, Phone, Salary month, Paid salary for the current month

Soln:-

```
select emp_name , contact , emp_salary ,emp_paid from employee join transaction on
employee.emp_id =transaction.emp_id
where Month(emp_dop)=Month(current_date()) order by emp_paid desc limit 5;
```

Q4:- Fetch the employee's name, phone, dob, department name, salary who join last month.

Soln :-

```
Query select emp_name,contact,emp_DOB,emp_department,emp_salary from employee
-> where month(emp_DOJ)=month(current_Date)-1;
```

```
mysql> select emp_name,contact,emp_DOB,emp_department,emp_salary from employee
-> where month(emp_DOJ)=month(current_Date)-1;
+-----+-----+-----+-----+-----+
| emp_name | contact | emp_DOB | emp_department | emp_salary |
+-----+-----+-----+-----+-----+

| Shivank  | 1234567899 | 1997-02-25 | IOS | 13000 |
+-----+-----+-----+-----+-----+
4 rows in set (0.01 sec)
```

Q5:- Create a Program in PHP that will fetch and show employee details whose DOB is today?

Soln:-

```
<?php
```

```
try
```

```
{
```

```
$conn =new PDO('mysql:host=127.0.0.1;dbname=Assignments','debian-sys-
maint','0MONCnvln7dIERyI');
```

```
$conn->setAttribute(PDO::ATTR_ERRMODE, PDO::ERRMODE_EXCEPTION);
```

```
$data1=$conn->query("select * from employee where
month(emp_DOB)=month(current_Date()) and day(emp_DOB)=day(current_date())");
```

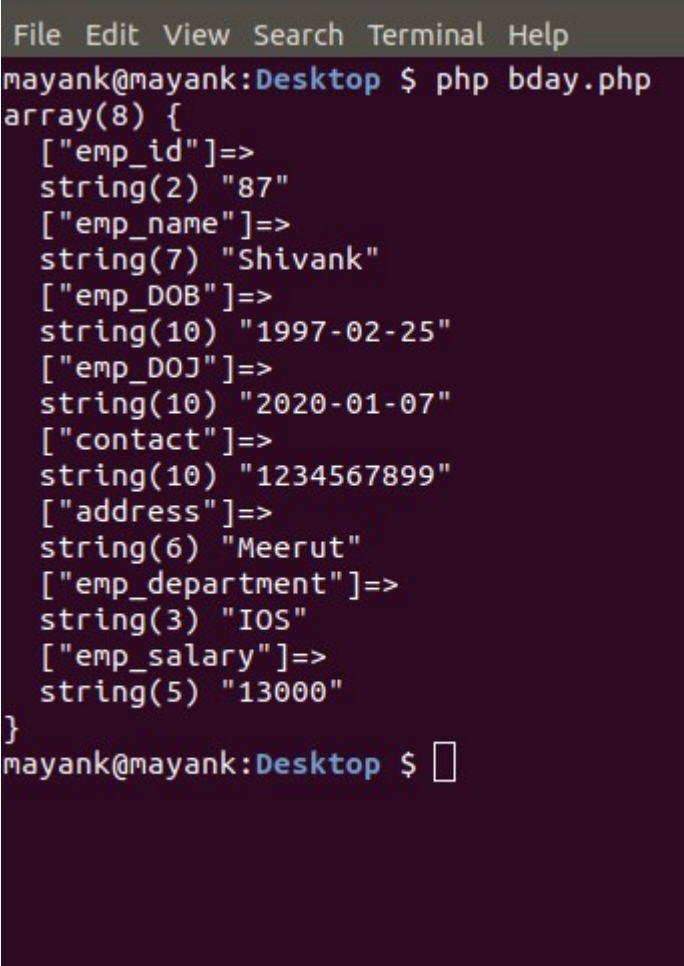

```
while( $row = $data1->fetch(PDO::FETCH_ASSOC) ) {
```

```
var_dump($row);
```

```
}
```

```
}  
catch(PDOException $ex){  
die('Error:'. $ex);  
}
```

?>

```
File Edit View Search Terminal Help  
mayank@mayank:Desktop $ php bday.php  
array(8) {  
    ["emp_id"]=>  
    string(2) "87"

    string(5) "13000"  
}
```

Que 6:- What are the advantage & disadvantage of Index?

Soln:-

Advantages

- Speed up SELECT query
- Helps to make a row unique or without duplicates(primary,unique)
- If index is set to full-text index, then we can search against large string values. for example to find a word from a sentence etc.

Disadvantages

- Indexes take additional disk space.

- indexes slow down INSERT, UPDATE and DELETE, but will speed up UPDATE if the WHERE condition has an indexed field. INSERT, UPDATE and DELETE becomes slower because on each operation the indexes must also be updated.

Ques7:- . Create two tables in MYSQL that shows working of INNER, LEFT, RIGHT.

Soln:-

1. Inner Join

select * from employee inner join transaction on employee.emp_id = transaction.emp_id

```
mysql> select * from employee inner join transaction where employee.emp_id=transaction.emp_id;
```

emp_id	emp_name	emp_DOB	emp_D0J	contact	address	emp_department	emp_salary	emp_id	emp_name	emp_D0J	emp_sala
3	Risabh	1996-05-09	2020-01-01	9310184828	Agra	Android	15000	3	Risabh	2020-01-01	150
1450	2020-01-31										
33	Prashant	1997-12-25	2010-01-01	9810184828	Sonipat,Haryana	PHP	12000	33	Prashant	2010-01-01	120
11000	2020-01-31										
3	Risabh	1996-05-09	2020-01-01	9310184828	Agra	Android	15000	3	Risabh	2020-01-01	150
15000	2020-02-28

Tushar	15000	2020-02-28
mayank	36000	2020-02-28
Karan	NULL	NULL
Sashank	NULL	NULL

9 rows in set (0.00 sec)

3. Right join

select employee.emp_name , emp_paid, emp_dop from employee right join transaction on employee.emp_id=transactio.emp_id

```
mysql> select employee.emp_name , emp_paid,emp_dop from employee Right join transaction on employee.emp_id=transaction.emp_id;
+-----+-----+-----+
| emp_name | emp_paid | emp_dop |
+-----+-----+-----+
| Risabh   | 1450    | 2020-01-31 |
| Prashant | 11000   | 2020-01-31 |
| Risabh   | 15000   | 2020-02-28 |
| Prashant | 11500   | 2020-02-28 |
| Tushar   | 14500   | 2020-01-31 |
| Tushar   | 15000   | 2020-02-28 |
| mayank   | 36000   | 2020-02-28 |
+-----+-----+-----+
7 rows in set (0.00 sec)

mysql>
```

MONGO DB ASSIGNMENT

Q8 :- create a database "Bootcamp" with table "mongo".

Soln: -

create table name boot camp:-

use boot camp ;

```
File Edit View Search Terminal Help
mayank@mayank:~$ mongo
MongoDB shell version v3.6.3
connecting to: mongod://127.0.0.1:27017

> use BOOTCAMP
switched to db BOOTCAMP
>
```

create table named mongo

```
db.mongo.insert({
... name:"mayank",
```

```

... age:22,
... competency : "DRUPAL",
... POST : "TRAINEE"
... }
... )
WriteResult({ "nInserted" : 1 })

```

```

> db.mongo.insert({
... name:"mayank",
... age:22,
... competency : "DRUPAL",
... POST : "TRAINEE"
... }
... )
WriteResult({ "nInserted" : 1 })
> show collections
mongo
> db.mongo.find({});
{ "_id" : ObjectId("5e574f2a6ba7936a38203df0"), "name" : "mayank", "age" : 22, "competency" : "DRUPAL", "POST" : "TRAINEE" }
>

```

Ques 9 :- Write a PHP program to perform Create, Read, Update and Delete Operations.

Soln :-

Form.html

(A Form to take value from user)

code:-

```

<!DOCTYPE html>
<html>
<head>
<title> Form </title>
</head>
<body>
<form name = "f1 " , action="operation.php" method="post">
<center>
<table>
<tr> <td> <h2> NAME </h2></td><td><input type="text" name="fn"
placeholder="first name " </td></tr>
<tr> <td> <h2> AGE </h2></td><td><input type="text" name="age"
placeholder="Age " </td></tr>
<tr> <td> <h2> Competancy </h2></td><td><input type="text" name="comp"
placeholder="completancy " </td></tr>
<tr> <td> <h2> Post </h2></td><td><input type="text" name="post"
placeholder="Post " </td></tr>
<tr>
<td><input type="submit" name=create value="create"</td>
<td><input type="submit" name="Read" value="Read"</td>
</tr>
<tr>
<td><input type="submit" name="UPD" value="update"</td>
<td><input type="submit" name="Delete" value="Delete"</td>
</tr>
</table>

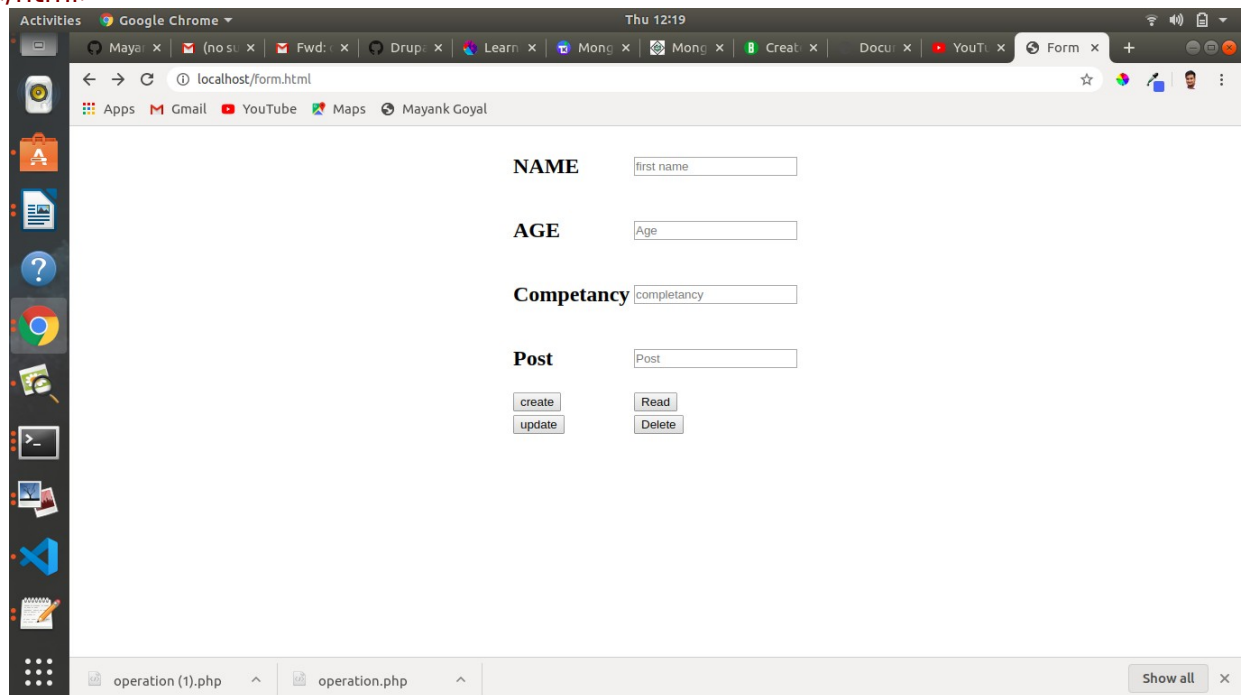

```

```

</center>
</form>

</body>
</html>

```

PHP Code for Database connectivity :-

```
<?php
```

```

$manager = new MongoDB\Driver\Manager("mongodb://localhost:27017");
$con = new MongoDB\Driver\Query([], []);
$data = $manager->executeQuery('bootcamp.mongo', $con);
$bulk = new MongoDB\Driver\BulkWrite;
$doc=[ 'id'=> new MongoDB\BSON\ObjectID , name =>
$_POST["fn"],age=>$_POST["age"],competancy=>$_POST["comp"],POST=>$_POST["post
"]];
if(isset($_POST['Read']))
{

if($data)
{
?>
    <br><br>
    <table border="2">
        <tr>
            <th>Name</th>
            <th>Age</th>
            <th>Competancy</th>
            <th>Post</th>
        </tr>
    </table>
?>
    foreach($data as $value)
    {
?>

```

```

        <tr>
        <td> <?php echo $value->name; ?> </td>
        <td> <?php echo $value->age; ?> </td>
        <td> <?php echo $value->competancy; ?> </td>
        <td> <?php echo $value->POST;?></td>
        </tr>
    <?php
    }
?>
</table>
<?php
}
else
echo "value not set";
}

if(isset($_POST['create']))
{
    $bulk->insert($doc);
    $manager->executeBulkWrite('bootcamp.mongo', $bulk);
    echo "<script>alert('Record Inserted
Successfully');window.location='form.html';</script>";
}

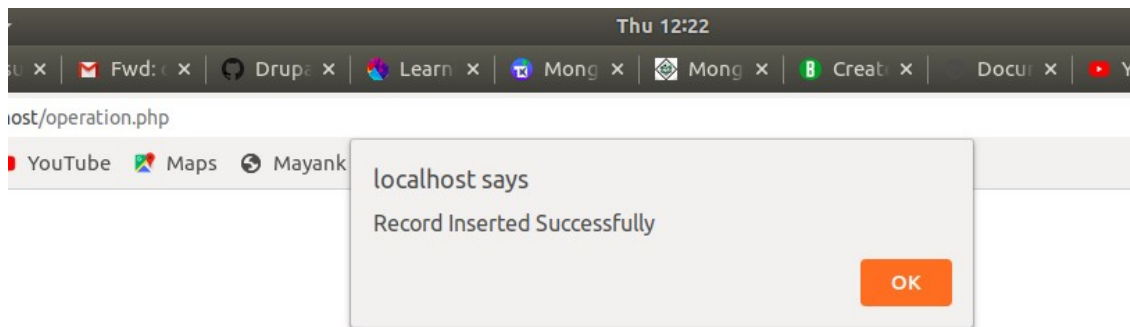

if(isset($_POST["UPD"]))
{
    $bulk->update(['name' => $_POST["fn"]], ['$set' =>
['age'=>$_POST["age"],'competancy'=>$_POST["comp"],'POST'=>$_POST["post"]]]);
    $manager->executeBulkWrite('bootcamp.mongo', $bulk);
    echo "<script>alert('Record Updated
Successfully');window.location='form.html';</script>";
}
if(isset($_POST["Delete"]))
{
    $bulk->delete(['name' =>
$_POST["fn"],'age'=>$_POST["age"],'competancy'=>$_POST["comp"],'POST'=>$_POST["p
ost"]]);
    $manager->executeBulkWrite('bootcamp.mongo', $bulk);
    echo "<script>alert('Record Deleted
Successfully');window.location='form.html';</script>";
}
?>

```

Case 1 :-
Create
Records :-

NAME	<input type="text" value="karan Pandey"/>
AGE	<input type="text" value="22"/>
Competancy	<input type="text" value="Android"/>
Post	<input type="text" value="Team lead"/>
<input type="button" value="create"/>	<input type="button" value="Read"/>
<input type="button" value="update"/>	<input type="button" value="Delete"/>

```

mongo
> db.mongo.find({});
{ "_id" : ObjectId("5e574f2a6ba7936a38203df0"), "name" : "mayank", "age" : 22, "competancy" : "DRUPAL", "POST" : "TRAINEE", "Address" : null, "Age" : "22" }
{ "_id" : ObjectId("5e576745e833c00e753eea99"), "id" : ObjectId("5e576745e833c00e753eea98"), "name" : "karan Pandey", "age" : "22", "competancy" : "Android", "POST" : "Team lead" }
>

```

2:- Read :-

Name	Age	Competancy	Post
mayank	22	DRUPAL	TRAINEE
karan Pandey	22	Android	Team lead

3:- UPDATE :-

loyal

NAME

AGE

Competancy

Post

A screenshot of a web browser window showing a table of data. The address bar shows 'localhost/operation.php'. Below the address bar, there are links for Apps, Gmail, YouTube, Maps, and M. The table has four columns: Name, Age, Competancy, and Post. It contains two rows of data: one for 'mayank' (Age 22, Competancy DRUPAL, Post TRAINEE) and one for 'karan Pandey' (Age 23, Competancy IOS, Post Trainee).

Name	Age	Competancy	Post
mayank	22	DRUPAL	TRAINEE
karan Pandey	23	IOS	Trainee
